1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In Claim 53, line 1, "operting" has been changed to "operating" to correct a typographical error.

2. The following is an examiner's statement of reasons for allowance: The prior art references do not teach a fiber-reinforced resin composite part comprising a steel substrate and a cured resin layer in between the steel substrate and the fiber-reinforced resin material wherein the cured resin layer comprises dispersed polyamide particles, is resistant to temperatures up to 700°F, and prevents acid in the composite from leaching iron from the steel substrate. The closest prior art, Tanaka et al teach a coating composition which is capable of forming a coating on various substrates, such as a steel plate, wherein the coating film is superior in corrosion resistance, adhesive property, impact resistance, and scratch resistance and is formed from a polyester resin and a melamine resin curing agent which together constitute a curable adhesive material, a rust preventive pigment, and organic polymer fine particles which do not melt and flow out during the curing of the composition applied and, even after the curing, remain as particles, particularly preferable is polyamide resin like nylon 11 or nylon 12. Tanaka et al do not teach or render obvious a fiber-reinforced composite part comprising the coated substrate as instantly claimed.
